We are terrified of what is already happening now and what lies ahead. We cannot sit back and continue with science as usual. We must act now to prevent catastrophic climate breakdown.

The scientific community has been ringing the alarm bell about the climate crisis for decades. But governments did not take our warnings seriously, and year after year, global emissions continued to rise. Today, they are at record highs.

Scientist Rebellion is an international movement of scientists and academics who believe that the scientific community has the responsibility to step up and join the forefront of the climate movement. We have coordinated actions by over 1000 scientists in 27 countries in the past.

The solutions to address the climate emergency already exist. The key obstacle is entrenched power perpetuating the status quo. Civil disobedience has proven to be a powerful tool for driving social change on short timescales. It is our emergency brake.

By engaging in civil disobedience, scientists can lend credibility to the wider climate movement and accelerate social tipping processes like few other groups in society can.

With your help, we can prevent climate breakdown and create a better future for all.

The time is now. Join us!
